## SIS<sup>+</sup> Webhosting

The “**Statistical Information System**” (**SIS<sup>+</sup>**), which has been developed by PAYMENT-iT, is available to processors as well as Sparkassen and banks as an Internet application.

**SIS<sup>+</sup>** is a complete Data Warehouse solution, which provides comprehensive data analysis mechanisms based on the provided standard interpretations as well as on individually defined analysis requirements of the complete payment card lifecycle, especially credit cards.

Our product **SIS<sup>+</sup>** offers access to the financial institution's data directly through a web browser (e.g. Internet Explorer). The software and the customer data can be stored either on the institution's own servers or on externally hosted ones.

PAYMENT-iT, being an Application Service Provider, can take over the complete maintenance and administration of the applications as well as hosting of the data on our servers, if you wish. That way your institution is freed from the technicalities of the business and can focus on the interpretation of the processed data without having to care about technical aspects.

PAYMENT-iT hosts its servers in a dedicated computer center, in which data for more than 6 million cards is being processed. At present time more than 400 banks and Sparkassen are using **SIS<sup>+</sup>** effectively.

For all users, who may be interested, we provide a demo version. It can be accessed through “My Access” on our website. ([www.payment-it.com](http://www.payment-it.com))
